Reinforcement learning (RL) is an area of machine learning concerned with how software agents ought to take actions in an environment so as to maximize some notion of cumulative reward.The problem, due to its generality, is studied in many other disciplines, such as game theory, control theory, operations research, information theory, simulation-based optimization, multi-agent systems, swarm ...

Indecision and delays are the parents of failure. The site contains concepts and procedures widely used in business time-dependent decision making such as time series analysis for forecasting and other predictive techniques

Time Series Analysis for Business Forecasting

These operators will â€œoperateâ€ on a wave function, Y, which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system.We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.
