detailed design and then have to redesign and reallocate reliability if the initial allocation is not achievable. The assignment of reliability values between the components can be made based on the complexity, criticality, estimated achievable reliability, or whichever factor the engineering team performing the analysis

deems important.

Reliability-Based Structural Design - academia.edu

Reliability of a structural system can be defined as its ability to fulfill its design functions for a specified time period. This ability is commonly measured using probabilities. Reliability is therefore, the occurrence probability of the complementary event to failure. Based on this definition, reliability is one of the components of risk.
